- **Website Design:** Wireframing, Layout Composition, and Visual Branding

TOOLS & TECHNOLOGIES

- **Frontend Frameworks & Libraries:** React.js, React Router, Tailwind CSS, Framer motion
- **Development Tools & Utilities:** Vite, ESLint, Axios

CRM TOOLS & PLATFORMS

- Salesforce – supports end-to-end project coordination

PROFILE

Web Designer / Frontend Developer

I am a web designer with hands-on experience building and maintaining websites using Duda as my primary platform. In my main role, I analyze project documents and requirements provided by web consultants and clients, ensuring clarity and accuracy before implementation. When instructions are unclear or conflicting, I directly coordinate with both clients and web consultants to resolve issues and align expectations.

I regularly handle website problem-solving tasks such as fixing broken links, implementing design changes, and performing client-requested modifications. I use Salesforce as the primary tool for managing communication, instructions, email coordination, and project pipelines. I also utilize Adobe Photoshop and Adobe Illustrator for image editing and design asset preparation.

In addition, I collaborate in reporting and communicating bugs directly to Duda, particularly those found in the builder or editor prior to deployment. Beyond no-code and CMS-based development, I have expanded into modern frontend development, using HTML, CSS, JavaScript, Tailwind CSS, and React to create functional, responsive, and performance-focused websites.

WORK EXPERIENCE

eClerx Philippines Inc. 2022 - PRESENT
Analyst - Website Designer

Experienced web designer in an ISO-compliant environment, building and maintaining websites on Duda. Handles client communications, requirement analysis, and website support tasks such as design updates, broken link fixes, and implementing HTML widgets only when Duda's built-in features are insufficient. Uses Salesforce for documentation, email coordination, and pipeline management, and Adobe Photoshop & Illustrator for visual asset editing.

Performance is tracked using scorecards and metrics, including website quality evaluation, production churn rate, and project examinations, with structured coaching and feedback to ensure continuous improvement. Actively participates in reporting platform bugs prior to deployment, maintaining quality and compliance throughout the website lifecycle.
